Professional Experience

Freelance Fullstack Developer · ARKO, Thibaut Lefrançois EI September 2026 - Present

Independent fullstack developer. I integrate into existing teams to take ownership of complex technical projects: distributed architectures, multi-provider integrations, payment systems, data pipelines. Autonomous from codebase analysis to production deployment.

- Full setup and management of the business: professional liability insurance, invoicing, accounting, client relations
- Built an activity management system and AI automations to maximize time spent on engineering

Mission at Raccourci Agency (September → November 2026)

Called back after my apprenticeship to complete and deliver the critical features of Youbook, a multi-activity SaaS booking platform. Only external developer at the company, which typically never outsources.

Stack: Kotlin · Ktor 3 · Vue 3 · TypeScript · Temporal · PostgreSQL · Docker · Kubernetes

Fullstack Developer (Apprenticeship) · Raccourci Agency April 2024 - August 2026

One of the main developers on Youbook, a multi-activity SaaS booking platform for the tourism industry (microservices architecture, Kotlin/Ktor, Vue 3, PostgreSQL). Grew from apprentice to autonomous developer on critical projects, which led the company to call me back as a freelancer right after the contract ended.

- Designed and built from scratch several REST APIs in Kotlin/Ktor 3: shopping carts, transactions, multi-provider booking aggregation, payment orchestration (Stripe, Payzen)
- Orchestrated transaction lifecycle via Temporal: parallel booking confirmation, partial payment capture, real-time communication through SSE
- Developed an ETL processing multiple booking connectors with Apache Pulsar, concurrent pipelines and backpressure
- Built a library of ten+ Vue 3 Web Components (Shadow DOM, Pinia, i18n) embeddable on third-party sites
- Implemented an interactive map mode with OpenSearch geospatial search and a native multi-step booking widget
- Configured GitLab CI/CD for all services with automated deployment on Kubernetes via Jenkins and Helm
- Set up comprehensive monitoring: Grafana, Prometheus, Loki, health checks

Projects

steerkit (Personal project - npm package)

- TypeScript library of Craig Reynolds' steering behaviors (seek, arrive, wander...), zero allocation per frame, published on npm with interactive demos

Ocarina, Songs of Hyrule (Personal project)

- Playable ocarina in the browser with Three.js, TypeScript, Vite: 21 songs recognized from keyboard or touch input, 3D models compressed from 7.1 MB to 1.2 MB

Ocean Heartbeat (Hackathon Nuit de l'Info 2024 - Winner)

- Immersive underwater 3D experience in React Three Fiber, GSAP, Zustand, developed in one night, winner of the retro post-processing challenge

Portfolio & Technical Blog

- Personal website built with Astro, featuring a technical blog and creative experiments (shaders, 3D scenes)

Technical Skills

Languages	Kotlin, Java, TypeScript
Backend	Ktor, Spring Boot (training), REST API, Exposed ORM, PostgreSQL, Flyway, Jackson

Frontend	Vue 3, Astro, Pinia, Web Components, Tailwind CSS
Orchestration	Temporal, Apache Pulsar, Workflow orchestration, Event-driven architecture
DevOps	Docker, Kubernetes, Helm, GitLab CI, Jenkins, Grafana, Prometheus, Loki
Testing	JUnit 5, MockK, Testcontainers, Vitest, Konsist
Creative	Three.js, React Three Fiber, GSAP, WebGL, Shaders
AI	Claude Code (skills, agents, MCP), Prompt engineering
Tools	Git, IntelliJ IDEA, ClickUp, Postman

Education

Software Development Expert · OpenClassrooms — 2025 - 2026

RNCP Level 7 (Master's equivalent) - Full-stack developer track (Java, Spring Boot, Angular)

Three.js Journey · Online Course — 2024 - Present

WebGL development, shaders, creative coding

Bachelor's in Computer Science (BUT Informatique) · IUT La Rochelle — 2022 - 2025

Full-stack developer track

High School Diploma (BAC STI2D - SIN) · Lycée Léonce Vieljeux — 2019 - 2022

Specialization: Information Systems & Digital, Technological Innovation

Recommendations

Xavier Hernandez · Frontend Developer · TypeScript · Vue · React — Same team

> « Thibaut is a curious, proactive full-stack developer who is always ready to take on new challenges. He learns quickly, doesn't hesitate to take initiative, and knows when to reach out to others. His collaborative spirit and positive attitude greatly contribute to team dynamics. He's a serious, motivated, and pleasant colleague to work with. I recommend him without hesitation. »

Bastien Grisvard · Software Architect · Backend Developer — Same team

> « I had the great pleasure of working daily with Thibaut. As a backend developer, collaborating with such a well-rounded full-stack profile is a real asset. What I particularly remember from our work together are our mutual code review sessions: Thibaut's feedback is always relevant and constructive. He combines an excellent understanding of server-side constraints with strong frontend expertise. He's a rigorous, reliable developer and an excellent teammate whom I recommend without hesitation. »

Axel Bourdy · Backend Developer — Same team

> « Thibaut was a key driver in the success of my apprenticeship, thanks to his kindness and constant desire to do things right. He helped me quickly integrate into the team, learn the basics of Kotlin, and understand the interconnected applications of our stack. He also provided numerous precise and highly relevant code reviews. It was a true pleasure to collaborate with him on shared tasks, alongside someone with such extensive knowledge and solid skills in both backend and frontend. Thibaut is an excellent, highly talented full-stack developer with great expertise and, above all, tremendous curiosity. »
